**Dear Hiring Team at Stripe,**

I am thrilled to apply for the Software Engineer Internship at Stripe. As someone who has always been inspired by how technology can solve real-world problems, Stripe's mission of increasing the GDP of the internet strikes a deep chord with me. I aspire to be part of a team that builds tools empowering businesses and individuals to thrive globally.

As a Computer Science undergraduate at Chitkara University (CGPA: 8.98), I've dedicated myself to exploring the intersection of creativity and logic in software development. Whether it's solving 450+ challenging problems on LeetCode or designing seamless applications with JavaScript, React.js, and Node.js, I've learned that solving complex problems is not just about code—it's about understanding the people and processes the code serves.

Among the projects I've built, a few stand out as particularly meaningful:

- Fitter Health: A fitness-focused app using Next.js, TypeScript, and Redis, which integrates AI-driven real-time feedback to keep users motivated.
- PG Management System: A full-stack solution built with React, Mongoose, and Node-Cron to make managing rent tracking and tenant communication effortless.
- FilePool: A storage lending marketplace powered by WebRTC, designed to encourage resource sharing and foster sustainability.

I would be honored to bring my skills and passion to your team. Thank you for considering my application. I look forward to the opportunity to discuss how my background and goals align with Stripe's mission.

Sincerely,  
**Jaskirat Singh**
